4. Function description

DEFINITION:
- **SYSTEM START:** Start of the working session by touching the remote control **START** button. With the SYSTEM START the receiver set up the radio communication with the remote control (CloseLink). Is now possible to activate all the system functions through the handheld remote control.
  The **Emergency Output**, if present, is switched on at the SYSTEM START instant.
- **SYSTEM STOP:** End of the working session. The SYSTEM STOP happens in the following conditions:
  - Pushing the **STOP** button or the **EMERGENCY** button on the remote control or,
  - After Tout minutes in which the remote control stays unused or,
  - If the radio connection (CloseLink) falls down or,
  - Some operation are done through the receiver emergency keyboard (if present).
  The **Emergency Output**, if present, is switched off at the SYSTEM STOP instant.

FUNCTION ACTIVATION THROUGH REMOTE CONTROL

BUTTON	FUNCTION	RECEIVER OUTPUT BEHAVIOUR	MODE	S.P.
START	SYSTEM START	E.O. On	-	☐
STOP	SYSTEM STOP	E.O. Off	-	☐
1	EV 1	M.O. + OUT 1	M	☐
2	EV 2	M.O. + OUT 2	M	☐
3	EV 3	M.O. + OUT 3	M	☐
4	EV 4	M.O. + OUT 4	M	☐

M: MAINTAINED function. As long as the user hold the button pushed, the correspondent output on the receiver stay on. They will be switched off as soon as the user release the button.
L: LATCHED function (or ON/OFF). The receiver output stay on when the button is released. They will be switched off with the next button touch.
Output switch on and off can be also realized through two different buttons.
S.P.: SafetyPoint related function. In order to enable this function the remote control must be placed close to the SafetyPoint Plate.
With this system is possible press two keys simultaneously as in the following table:

Y: possible   N: not possible

	K1	K2	K3	K4
K1	\	N	N	N
K2	N	\	N	N
K3	N	N	\	N
K4	N	N	N	\
